

What is Operating System ?

- An **operating system** or **OS** is a software program that enables the Hardware to communicate and operate with the Software.
- Operating System is a interface between User and hardware.
- Operating systems provide a software platform on top of which other programs, called application programs, can run.

What is Linux ?

1. Linux is a family of free and open-source software operating systems built around the Linux kernel.

2. The development of Linux is one of the most prominent example of free and open-source software collaboration.

What is Open Source?

1. The source code of a computer program is made available free of charge to the general public.
2. Users can view the code that comprises the software and make any kind of changes to it they want.
3. Anyone can take the source code and distribute their open program from it.
